

CALL RECORD UNIT

FOR CONNECTION TO ANY TELEPHONE HANDSET

MODEL CRU-3 STANDARD VERSION

Designed For Connection To Any Telephone Handset

Our model **CRU-3** is designed to connect to **ANY** telephone handset (PABX, Commander, VOIP or Residential telephone) and also to a **PC**, to provide for a powerful 'Personal' Call Recording solution. It can even connect to a headset.

CRU-3's sophisticated circuitry provides exceptional recording quality and flexibility, matched only by much more expensive 'system wide' solutions.

Individual **CRU-3's** need only be used by those staff that require telephone call recording, saving \$1000's for the typical user. Further units can then be fitted as required, in as little as 15 minutes.

A range of alternative Telephone **CALL RECORD UNITS** are also provided by National Communications:

Models CRU-1 and CRU-2 are designed for connection to a standard telephone socket and are ideal for use on a normal residential type telephone line.

Model CRU-4 (Professional Version)

- Can play an 'Advisory Message' to the other party before recording
- Can playback the current or previous recordings to the other party
- Can play MP3 based Audio Files, to the other party, at any time
- Can Auto Stop Recording when the handset is replaced
- Has an **OPTIONAL** Notes facility, which allows you to make, recall and edit notes for each recording

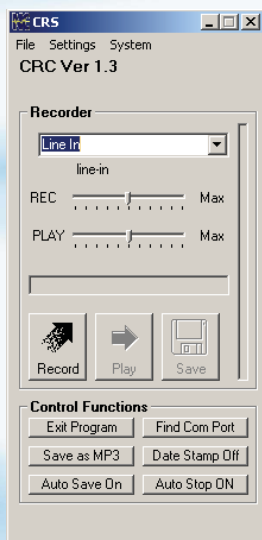

Easy '15 MINUTE' User Installation Supplied With **A TWO YEAR WARRANTY**

CRU-3's 'User Friendly' **CRS** software will allow you to **RECORD** and **SAVE** telephone call recordings as required. You can also inject 'recording tones' into the telephone call, to advise your callers that the call is to be recorded.

Telephone calls are saved in MP3 format, which minimizes memory usage and facilitates easy replay, storage and email transfer.

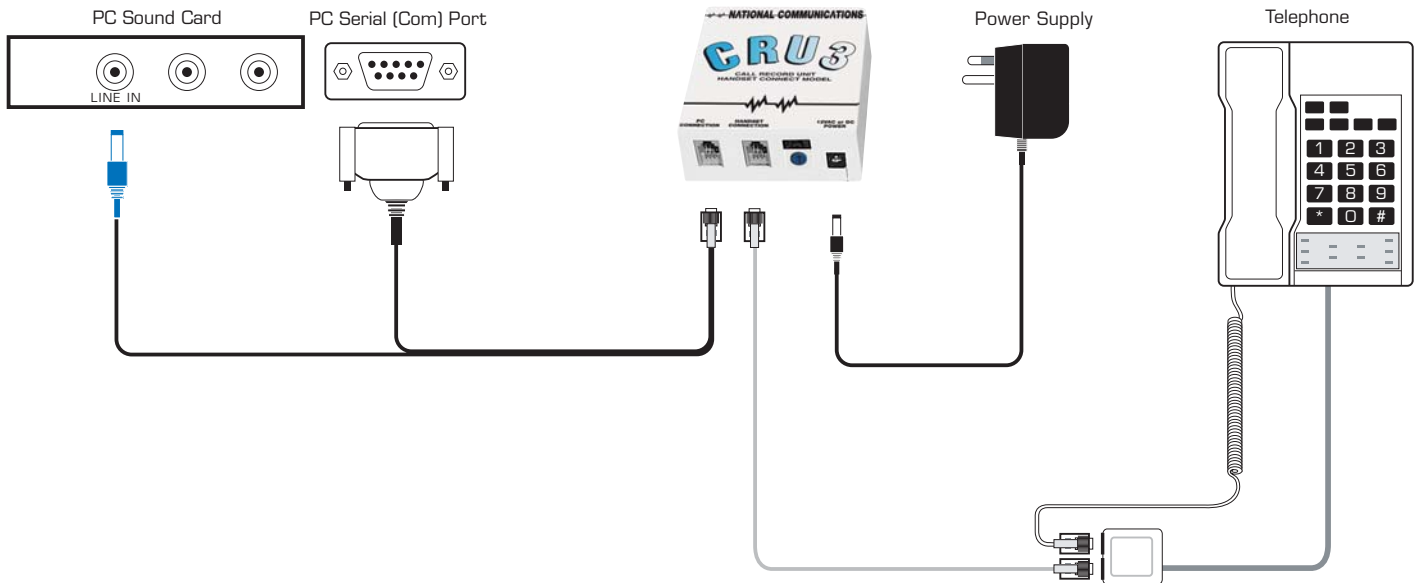

Call Recordings can be individually named, autonamed or stored by time and date on any local or network drive.

Installation Diagram

Call Record Unit - Model Selection Table

Model Number	Handset Connection	Telephone Line Connection	Recording Control from Any Telephone	Recording Tone Generation Regulatory Requirement	Provided with CRS Software	Message Announcement And Playback	Retail Price Including GST
CRU1	No	Yes	No	Yes	No	No	\$199.00
CRU2	No	Yes	Yes	Yes	Yes	No	\$299.00
CRU3	Yes	No	N/A	Yes	Yes	No	\$299.00
CRU4	Yes	No	N/A	Yes	Yes	Yes	\$399.00

HANDSET CONNECTION

This product is designed to connect direct to **ANY** telephone **HANDSET**, to provide for **PERSONAL** telephone call recording direct to a **PC**. This method is **IDEAL** for **BUSINESS USERS** connected to a **PABX** or **COMMANDER** type telephone system, with **MULTIPLE TELEPHONE LINES**, who need to record some or all of their telephone calls.

TELEPHONE LINE CONNECTION

This product is designed to connect direct to **ANY** telephone **SOCKET** on a telephone line, to provide telephone call recording for **ALL** devices connected to the telephone line. This method is **IDEAL** for **SINGLE LINE** Telephone Call Recording applications. **CRU1** is designed for users that will use a tape recorder or other dedicated recording device. **CRU2** is ideal for users that wish to use a PC for recording and sophisticated software is included.

RECORDING CONTROL FROM ANY TELEPHONE

CRU1 connects your telephone line to an attached recording device whenever a telephone call is in progress. **CRU2** will allow for Start and Stop recording control by any telephone on the line, using Touch Tone (DTMF) commands.

RECORDING TONE GENERATION

This facility allows for the optional input of a Recording Tone into a telephone call while it is being recorded, in order to meet regulatory telephone call recording requirements. The only other means of meeting regulatory requirements is to provide a **MESSAGE ANNOUNCEMENT**, advising the caller that the call may be recorded (this facility is provided by model **CRU4**).

CALL RECORDING SOFTWARE (CRS) SOFTWARE

CRS is a sophisticated software package written and provided by National Communications with **CRU2**, **CRU3** and **CRU4** models in order to allow an attached **PC** to be used to provide High Quality telephone call recordings. Call recordings are stored in MP3 format on the **PC's** hard drive or on a network drive. **CRS** is available as a \$50.00 option for **CRU1** users.

MESSAGE ANNOUNCEMENT AND PLAYBACK

Model **CRU4** allows for optional input of a stored **RECORDED ANNOUNCEMENT**, immediately prior to recording commencement. Announcements can be recorded by **CRU4**, or as **CRS** uses **MP3** format, announcements can be professionally prepared. Any number of Announcements can be preloaded into **CRS** and quickly and easily played to the other party as required. **CRU4** also allows for the current call or a previously recorded call to be played into the telephone call.

TWO YEAR WARRANTY
